

MASTER CAPABILITY STATEMENT

Infrastructure for AI agents that must keep context and evidence inside the boundary.

Perseus Computing LLC builds the system around the model: live context before an agent acts, governed memory after it acts, and evidence for the decisions that matter. It runs locally, including in disconnected and regulated environments where cloud memory and opaque state are not acceptable.

UEI: PJS2LW7HAK35 CAGE: 22JC5 SAM.gov: Active HQ: Austin, Texas

WHAT WE BUILD

- **Live context:** resolves repository, ticket, deployment, and decision state into bounded context before an agent acts.
- **Governed memory:** persists encrypted, bitemporal memory with durable journaling and explicit authority boundaries.
- **Evidence and provenance:** links actions and decisions to evidence, authority, and time so a review does not depend on an opaque dashboard.
- **Deployment boundary:** runs on-premises, air-gapped, in a private VPC, or on a controlled network with no required cloud service, API key, or vendor runtime.

WHY DEFENSE WORKFLOWS

AI can produce a plausible answer while losing the state that made it useful. Perseus keeps current context, governed memory, and a reviewable record in the same boundary as the workflow.

DISCUSS

Start with a bounded workflow, its data boundary, and the integration surface that needs to be made reviewable.

MEASURED EVIDENCE

79.0% LongMemEval QA / official-CoT mean / 3 signed runs	99.2% session-level retrieval recall@10 / retrieval-only	13/13 BEAM correctness / every 128K-10M token tier	40/s durable sustained write / 100K entities
---	---	---	---

Measured on named hardware with signed or committed reports and rerunnable methods. Methodology variants remain separately labeled; no customer ROI or compliance certification is implied.

WHERE IT FITS

CYBER & NETWORKS	AI/ML, DevSecOps, cyber, and enterprise IT workflows where context and evidence must stay inside the controlled network.
C3BM	Software factories and distributed decision workflows; enabling infrastructure, not a claim to own the mission platform.
ELECTRONIC SYSTEMS	Partner-led support where local, reviewable AI connects to sensing, EW, PNT, or mission-system workflows.

PROCUREMENT AND SECURITY POSTURE

Business	U.S. small business · NAICS 541715, 541511, 541512 · founder-led technical access	Deployment	On-premises, air-gapped, private VPC, or controlled network
Readiness	SPRS 110/110 · CMMC Level 2 final self-assessment, enclave scope	Supply chain	MIT-licensed · published SBOM · NIST AI RMF-aligned architecture

THE FIRST CONVERSATION

Start with a bounded workflow, its data boundary, and the integration surface that needs to be made reviewable.
