

Context, memory, and evidence infrastructure for AI agents. Perseus Computing LLC builds the local-first layer that helps agents operate on current state, retain governed memory, and leave an inspectable record of consequential work. The system is designed for on-premises, disconnected, private-VPC, and regulated environments where the data boundary is part of the mission.

UEI: PJS2LW7HAK35 CAGE: 22JC5 SAM.gov: Active HQ: Austin, Texas

CORE CAPABILITIES

- **Live context (Perseus):** resolves repository, ticket, deployment, and decision state into bounded, verifiable context before an agent acts.
- **Governed memory (Perseus Vault):** provides encrypted, bitemporal memory with durable journaling and explicit authority boundaries.
- **Evidence and provenance (Ledger):** links actions and decisions to evidence, authority, and time so reviews do not depend on an opaque dashboard.
- **Disconnected deployment:** local-first operation with no required cloud service, no required API key, and no mandatory vendor runtime.

MISSION FIT

PRIMARY · CYBER & NETWORKS	Secure AI/ML, DevSecOps, and local context/memory infrastructure for controlled enterprise and cyber workflows.
C3BM · ENABLING FIT	Evidence and context infrastructure for software factories, ABMS, and decision-advantage workflows; not a claim to own the mission platform.
ES · CONDITIONAL FIT	Partner-led integration path for sensing, EW, PNT, or mission-system programs where trusted local AI support is relevant.

MEASURED EVIDENCE

79.0% LongMemEval QA official-CoT mean; 3 signed runs	99.2% retrieval recall@10 retrieval-only	13/13 bi-temporal correctness gates through 10M tokens	40/s durable sustained write @100K entities
--	---	---	--

Measured on named hardware with signed or committed reports and rerunnable methods. Methodology variants remain separately labeled; no customer ROI or compliance certification is implied.

PROCUREMENT AND SECURITY POSTURE

Business	U.S. small business · NAICS 541715, 541511, 541512 · founder-led technical access	Deployment	On-premises, air-gapped, private VPC, or controlled network; zero required cloud dependencies
Assessment	SPRS 110/110 · CMMC Level 2 final self-assessment, enclave scope	Supply chain	MIT-licensed · published SBOM · NIST AI RMF-aligned architecture

Best starting point: a bounded technical briefing with Cyber & Networks, followed by a scoped pilot or prime/partner discussion. Bring the mission workflow, data boundary, and integration surface; Perseus will bring the smallest credible path.
