

C3BM

Software-factory agents need memory that survives the handoff.

Perseus gives AI-enabled C2 and software-factory workflows a local context and evidence layer without claiming to be the mission platform.

UEI: PJS2LW7HAK35 CAGE: 22JC5 SAM.gov: Active HQ: Austin, Texas

WHAT WE BUILD

- **Live context:** resolves repository, ticket, deployment, and decision state into bounded context before an agent acts.
- **Governed memory:** persists encrypted, bitemporal memory with durable journaling and explicit authority boundaries.
- **Evidence and provenance:** links actions and decisions to evidence, authority, and time so a review does not depend on an opaque dashboard.
- **Deployment boundary:** runs on-premises, air-gapped, in a private VPC, or on a controlled network with no required cloud service, API key, or vendor runtime.

WHY C3BM

Distributed teams and agents move through repositories, decisions, and operational artifacts. When state disappears between sessions, software-factory work becomes harder to review, re-plan, and trust. Perseus keeps the context and provenance available at the boundary where the work is done.

DISCUSS

A software-factory or distributed decision workflow, the context handoffs that fail today, and the existing integration surface.

MEASURED EVIDENCE

79.0% LongMemEval QA / official-CoT mean / 3 signed runs	99.2% session-level retrieval recall@10 / retrieval-only	13/13 BEAM correctness / every 128K-10M token tier	40/s durable sustained write / 100K entities
---	---	---	---

Measured on named hardware with signed or committed reports and rerunnable methods. Methodology variants remain separately labeled; no customer ROI or compliance certification is implied.

WHERE IT FITS

SOFTWARE FACTORIES	Durable context across agent sessions, repositories, tickets, and engineering handoffs.
C2 / DECISION	Evidence-backed memory for workflows that must be re-planned and reviewed.
PARTNER BOUNDARY	An enabling layer that can sit beside the mission platform, not a claim to replace it.

PROCUREMENT AND SECURITY POSTURE

Business	U.S. small business · NAICS 541715, 541511, 541512 · founder-led technical access	Deployment	On-premises, air-gapped, private VPC, or controlled network
Readiness	SPRS 110/110 · CMMC Level 2 final self-assessment, enclave scope	Supply chain	MIT-licensed · published SBOM · NIST AI RMF-aligned architecture

THE FIRST CONVERSATION

A software-factory or distributed decision workflow, the context handoffs that fail today, and the existing integration surface.
