

PERSEUS COMPUTING LLC

Infrastructure for AI agents in controlled environments.

Perseus Computing builds a three-product platform for AI workflows inside the operating boundary: Context Engine resolves live, bounded context; Perseus Vault retains governed local memory; Ledger records evidence, authority, and time. The platform is designed for on-premises, disconnected, and controlled-network deployments.

FOCUS Three mission entry points	DEPLOYMENT Local · on-premises · private VPC · disconnected enclave	IDENTITY UEI PJS2LW7HAK35 · CAGE 22JC5	LICENSE MIT · SBOM published

THE USEFUL DIFFERENCE

THE PROBLEM

AI can produce a plausible answer while losing the state that made it useful. The next operator then has to reconstruct the repository state, prior decision, or evidence trail before work can continue.

THE LAYER

Perseus joins context before action, governed memory across sessions, and evidence after action at the workflow boundary—without claiming to replace the model, mission platform, prime integrator, or approving authority.

WHAT PERSEUS PROVIDES

CONTEXT ENGINE Before action	Resolves live repository, ticket, deployment, and decision state into bounded context before an agent uses it.
PERSEUS VAULT Across sessions	Retains governed, bitemporal memory and local retrieval with durable journaling and explicit authority boundaries.
LEDGER After action	Records evidence, authority, approvals, and time so captured actions and served context can be reviewed later.

WHERE THE PLATFORM CONTRIBUTES

ROUTE	USE	CONTRIBUTION
C3BM	Software factories, resilient C2, and distributed decision workflows where a local context/memory/evidence layer strengthens the mission team.	Software factory layer
CYBER & NETWORKS	AI/ML, DevSecOps, RMF evidence, cyber, and enterprise IT workflows where state and provenance stay inside the controlled network.	Secure AI layer
ELECTRONIC SYSTEMS	Mission-system integration where local, reviewable AI connects to sensing, EW, PNT, or related workflows.	Mission-system integration

FIRST CONVERSATION Bring one bounded workflow, its data boundary, and the integration surface that needs to be made reviewable; we will define the platform contribution and the right technical conversation.

EVIDENCE AND PROCUREMENT

Proof with the condition attached.

The figures below are kept separate by measurement family so a reviewer can see what each result does—and does not—establish.

MEASURED EVIDENCE

MEASURE	RESULT	WHAT IT SHOWS	SCOPE
LongMemEval-S QA	82.0%	Latest completed full paired QA result: 410/500 candidate cases under the official-CoT answer prompt.	500q internal confirmation · control 83.2%
Session retrieval	99.2%	Relevant session memories remain available to the later task.	Retrieval-only · recall@10
BEAM correctness	13/13	The deterministic gauntlet stays correct across token tiers.	128K–10M token tiers
Durable write	40/s	Sustained write behavior at a 100K-entity scale.	Signed report · not bulk insert

LongMemEval-S: 82.0% candidate (410/500) vs 83.2% matched full-context control (416/500), -1.2 points. Execution/custody passed, but the preregistered success rule failed; no superiority, independent-holdout, or production-promotion claim is made. The provider-free rerun is provisional.

PROCUREMENT AND DEPLOYMENT

COMPANY		SECURITY AND BOUNDARY	
Legal name	Perseus Computing LLC	Deployment	Local, on-premises, private VPC, or customer-configured disconnected enclave
Business	U.S. small business · technical access	Readiness	SPRS 110/110 · CMMC Level 2 self-assessment, enclave scope
UEI / CAGE	PJS2LW7HAK35 / 22JC5	Software	MIT license · published SBOM
NAICS	541715 · 541511 · 541512	Data posture	No required cloud service, API key, or vendor runtime
SAM.gov	Active — All Awards	Integration	Mission hardware, safety, and test authority remain with the mission owner or qualified partner
JCP / DD2345	Approved · valid through 2031-08-18		

CURRENT ENGAGEMENT Engagement posture: start with a bounded workflow, data boundary, and integration surface. Perseus can define a technical path with a prime, mission-system owner, or government technical stakeholder.

SCOPE IN ONE SENTENCE

Perseus is the infrastructure around the model: context before action, governed memory across sessions, and evidence after action. It is not a claim to replace a mission platform, prime integrator, or sensor system.
