

PERSEUS COMPUTING LLC

Local AI support for mission-system workflows.

Perseus provides the context, governed memory, and evidence layer around an AI system; sensing, EW, PNT, and mission-system integration remains a partner-led conversation.

THE USEFUL DIFFERENCE

THE PROBLEM

Mission-system teams need to know what data an AI assistant saw, what it retained, and how a decision can be reviewed without moving the working record outside the program boundary.

THE LAYER

Perseus provides the local infrastructure for that record while leaving mission hardware, sensor integration, and prime-system responsibilities with the appropriate technical partner.

WHAT PERSEUS PROVIDES

CONTEXT Before action	Resolves repository, ticket, deployment, and decision state into bounded context before an agent uses it.
MEMORY Across sessions	Retains governed, bitemporal memory with durable journaling and explicit authority boundaries.
EVIDENCE After action	Links actions and decisions to evidence, authority, and time so a reviewer can reconstruct what happened.

WHERE IT FITS

ROUTE	USE	ROLE
SENSING / EW / PNT	Context and evidence support where local AI must remain close to the mission workflow.	Direct fit
MISSION DATA	Governed memory and provenance without requiring a cloud memory service.	Enabling fit
PARTNER-LED	A bounded infrastructure contribution for a prime, integrator, or technical performer.	Partner-led

FIRST CONVERSATION Bring a specific sensing, EW, PNT, or mission-system integration boundary, its deployment constraints, and the prime or partner role.

EVIDENCE AND PROCUREMENT

Proof with the condition attached.

The figures below are kept separate by measurement family so a reviewer can see what each result does—and does not—establish.

MEASURED EVIDENCE

MEASURE	RESULT	WHAT IT SHOWS	SCOPE
LongMemEval QA	79.0%	Answer quality when the agent receives the official context-of-thought protocol.	Official-CoT mean · 3 signed runs
Session retrieval	99.2%	Relevant session memories remain available to the later task.	Retrieval-only · recall@10
BEAM correctness	13/13	The deterministic gauntlet stays correct across token tiers.	128K–10M token tiers
Durable write	40/s	Sustained write behavior at a 100K-entity scale.	Signed report · not bulk insert

Measured on named hardware with signed or committed reports and rerunnable methods. No customer ROI, customer cost savings, or compliance certification is implied by these figures.

PROCUREMENT AND DEPLOYMENT

COMPANY		SECURITY AND BOUNDARY	
Legal name	Perseus Computing LLC	Deployment	On-premises, air-gapped, private VPC, or controlled network
Business	U.S. small business · technical access	Readiness	SPRS 110/110 · CMMC Level 2 self-assessment, enclave scope
UEI / CAGE	PJS2LW7HAK35 / 22JC5	Software	MIT license · published SBOM
NAICS	541715 · 541511 · 541512	Data posture	No required cloud service, API key, or vendor runtime
SAM.gov	Active — All Awards	Integration	Partner-led where mission hardware or sensors are involved

SCOPE IN ONE SENTENCE

Perseus is the infrastructure around the model: context before action, governed memory across sessions, and evidence after action. It is not a claim to replace a mission platform, prime integrator, or sensor system.
