

ELECTRONIC SYSTEMS

Local AI support for mission-system workflows.

Perseus provides the context, governed memory, and evidence layer around an AI system; sensing, EW, PNT, and mission-system integration remains a partner-led conversation.

UEI: PJS2LW7HAK35 CAGE: 22JC5 SAM.gov: Active HQ: Austin, Texas

WHAT WE BUILD

- **Live context:** resolves repository, ticket, deployment, and decision state into bounded context before an agent acts.
- **Governed memory:** persists encrypted, bitemporal memory with durable journaling and explicit authority boundaries.
- **Evidence and provenance:** links actions and decisions to evidence, authority, and time so a review does not depend on an opaque dashboard.
- **Deployment boundary:** runs on-premises, air-gapped, in a private VPC, or on a controlled network with no required cloud service, API key, or vendor runtime.

WHY ELECTRONIC SYSTEMS

Mission-system teams need to know what data an AI assistant saw, what it retained, and how a decision can be reviewed without moving the working record outside the program boundary. Perseus is the local infrastructure for that record.

DISCUSS

A specific sensing, EW, PNT, or mission-system integration boundary, its deployment constraints, and the prime or partner role.

MEASURED EVIDENCE

79.0% LongMemEval QA / official-CoT mean / 3 signed runs	99.2% session-level retrieval recall@10 / retrieval-only	13/13 BEAM correctness / every 128K-10M token tier	40/s durable sustained write / 100K entities
--	--	--	--

Measured on named hardware with signed or committed reports and rerunnable methods. Methodology variants remain separately labeled; no customer ROI or compliance certification is implied.

WHERE IT FITS

SENSING / EW / PNT	Context and evidence support where local AI must remain close to the mission workflow.
MISSION DATA	Governed memory and provenance without requiring a cloud memory service.
PARTNER-LED	A bounded infrastructure contribution for a prime, integrator, or technical performer.

PROCUREMENT AND SECURITY POSTURE

Business	U.S. small business · NAICS 541715, 541511, 541512 · founder-led technical access	Deployment	On-premises, air-gapped, private VPC, or controlled network
Readiness	SPRS 110/110 · CMMC Level 2 final self-assessment, enclave scope	Supply chain	MIT-licensed · published SBOM · NIST AI RMF-aligned architecture

THE FIRST CONVERSATION

A specific sensing, EW, PNT, or mission-system integration boundary, its deployment constraints, and the prime or partner role.
