

CAPABILITY STATEMENT

Local AI support for mission-system workflows.

Perseus provides the context, governed memory, and evidence layer around an AI system; sensing, EW, PNT, and mission-system integration remains a partner-led conversation.

UEI PJS2LW7HAK35 CAGE 22JC5 SAM Active HQ Austin, Texas

PRIMARY FIT	Partner-led fit
DEPLOYMENT	Local / air-gapped / private VPC
PROCUREMENT	SAM active · CAGE 22JC5

THE PROBLEM WE SOLVE

Mission-system teams need to know what data an AI assistant saw, what it retained, and how a decision can be reviewed without moving the working record outside the program boundary.

WHAT CHANGES

Perseus provides the local infrastructure for that record while leaving mission hardware, sensor integration, and prime-system responsibilities with the appropriate technical partner.

THE PERSEUS SYSTEM

01 / CONTEXT Before the agent acts Resolves repository, ticket, deployment, and decision state into bounded context before a model uses it.	02 / MEMORY After the session ends Vault retains encrypted, bitemporal memory with durable journaling and explicit authority boundaries.	03 / EVIDENCE When the work is reviewed Ledger links actions and decisions to evidence, authority, and time instead of leaving the record in an opaque dashboard.
---	--	---

WHERE THIS FITS

SENSING / EW / PNT PRIMARY FIT	Context and evidence support where local AI must remain close to the mission workflow.
MISSION DATA ENABLING FIT	Governed memory and provenance without requiring a cloud memory service.
PARTNER-LED PARTNER-LED	A bounded infrastructure contribution for a prime, integrator, or technical performer.

EVIDENCE AND PROCUREMENT

Proof first. Claims stay attached to their method.

The figures below are drawn from the public claims registry. They are presented with the measurement family and condition that give each number meaning.

MEASURED EVIDENCE

79.0%

LongMemEval QA
Official-CoT mean of three signed runs.

99.2%

Session retrieval recall@10
Retrieval-only session-level result.

13/13

BEAM correctness
Every 128K–10M token tier; deterministic gauntlet.

40/s

Durable sustained write
Signed scale report at 100K entities; not an in-memory insert rate.

Measured on named hardware with signed or committed reports and rerunnable methods. Methodology variants remain separately labeled. No customer ROI, customer cost savings, or compliance certification is implied by these figures.

PROCUREMENT FACTS

COMPANY

Legal name
Perseus Computing LLC

Business
U.S. small business · founder-led technical access

UEI / CAGE
PJS2LW7HAK35 / 22JC5

NAICS
541715 · 541511 · 541512

SECURITY AND DEPLOYMENT

Boundary
On-premises, air-gapped, private VPC, or controlled network

Readiness
SPRS 110/110 · CMMC Level 2 final self-assessment, enclave scope

Software
MIT license · published SBOM · NIST AI RMF-aligned architecture

Data posture
No required cloud service, API key, or vendor runtime

Integration
Partner-led where mission hardware or sensors are involved

DEPLOYMENT BOUNDARY

Run the context, memory, and evidence layers where the program keeps its working data.
Air-gapped, on-premises, private VPC, and controlled-network deployment are supported postures.
