

CAPABILITY STATEMENT

The infrastructure around the model.

Perseus Computing keeps context, governed memory, and evidence inside the boundary where an AI workflow operates. The system runs locally, including in disconnected and regulated environments where cloud memory and opaque state are not acceptable.

UEI PJS2LW7HAK35 CAGE 22JC5 SAM Active HQ Austin, Texas

PRIMARY FIT	All three routes
DEPLOYMENT	Local / air-gapped / private VPC
PROCUREMENT	SAM active · CAGE 22JC5
CONTACT	perseus@perseus.observer

THE PROBLEM WE SOLVE

AI can produce a plausible answer while losing the state that made it useful. The next operator then has to reconstruct the repository state, prior decision, or evidence trail before work can continue.

WHAT CHANGES

Perseus gives the workflow a current starting point, durable memory across sessions, and a record that can be reviewed later.

THE PERSEUS SYSTEM

01 / CONTEXT Before the agent acts Resolves repository, ticket, deployment, and decision state into bounded context before a model uses it.	02 / MEMORY After the session ends Vault retains encrypted, bitemporal memory with durable journaling and explicit authority boundaries.	03 / EVIDENCE When the work is reviewed Ledger links actions and decisions to evidence, authority, and time instead of leaving the record in an opaque dashboard.
---	--	---

WHERE THIS FITS

CYBER & NETWORKS PRIMARY FIT	AI/ML, DevSecOps, cyber, and enterprise IT workflows where context and evidence must stay inside the controlled network.
C3BM ENABLING FIT	Software factories and distributed decision workflows; enabling infrastructure, not a claim to own the mission platform.
ELECTRONIC SYSTEMS PARTNER-LED	Partner-led support where local, reviewable AI connects to sensing, EW, PNT, or mission-system workflows.

EVIDENCE AND PROCUREMENT

Proof first. Claims stay attached to their method.

The figures below are drawn from the public claims registry. They are presented with the measurement family and condition that give each number meaning.

MEASURED EVIDENCE

79.0%

LongMemEval QA
Official-CoT mean of three signed runs.

99.2%

Session retrieval recall@10
Retrieval-only session-level result.

13/13

BEAM correctness
Every 128K–10M token tier; deterministic gauntlet.

40/s

Durable sustained write
Signed scale report at 100K entities; not an in-memory insert rate.

Measured on named hardware with signed or committed reports and rerunnable methods. Methodology variants remain separately labeled. No customer ROI, customer cost savings, or compliance certification is implied by these figures.

PROCUREMENT FACTS

COMPANY

Legal name
Perseus Computing LLC

Business
U.S. small business · founder-led technical access

UEI / CAGE
PJS2LW7HAK35 / 22JC5

NAICS
541715 · 541511 · 541512

SECURITY AND DEPLOYMENT

Boundary
On-premises, air-gapped, private VPC, or controlled network

Readiness
SPRS 110/110 · CMMC Level 2 final self-assessment, enclave scope

Software
MIT license · published SBOM · NIST AI RMF-aligned architecture

Data posture
No required cloud service, API key, or vendor runtime

Integration
Partner-led where mission hardware or sensors are involved

DEPLOYMENT BOUNDARY

Run the context, memory, and evidence layers where the program keeps its working data.
Air-gapped, on-premises, private VPC, and controlled-network deployment are supported postures.
